

Román Alejandro López Ruvalcaba

Analytics Engineering

romloc1706@hotmail.com | (33) 2343-4337 | [linkedin](#) | [Portfolio](#) | Guadalajara, México | English (B2)

PROFESSIONAL SUMMARY

Analytics Engineer with hands-on experience designing and building a production-grade Medallion Architecture (Bronze/Silver/Gold) data warehouse on SQL Server, integrating ERP data end-to-end — from raw ingestion through star-schema dimensional modeling to executive-facing Power BI dashboards. Skilled in advanced SQL (T-SQL, stored procedures, incremental ETL), SCD Type 1/2 dimensional design, and reconciling complex financial data at scale. Combines analyst-level business communication with engineer-level ownership of the full data pipeline.

TECHNICAL SKILLS

Data Engineering: Medallion Architecture (Bronze/Silver/Gold), ETL/ELT pipeline design, incremental loads (MERGE), SCD Type 1 & 2 dimensional modeling, data reconciliation & validation

SQL: Advanced T-SQL, stored procedures, temporal joins, window functions, query optimization (SQL Server)

BI & Visualization: Power BI (PBIP/TMDL authoring, DAX, Power Query), star-schema semantic modeling, KPI design

Programming: Python (data validation, automation), Excel (advanced)

Source Systems: SAP ECC (linked-server integration)

Tools: Git / GitHub, SSMS

In Progress: Microsoft PL-300 (Power BI Data Analyst Associate)

WORK EXPERIENCE

Analytics Engineer | CIOSA Autotodo

August 2025 – Present

- Designed and built a full Medallion Architecture data warehouse (Bronze/Silver/Gold) on SQL Server, integrating SAP ECC accounts-receivable and customer-master data.
- Established the team's single source of truth by exposing curated, analysis-ready Gold-layer tables, eliminating the repeated manual data-cleaning work analysts previously redid for every report.
- Modeled a star schema with SCD Type 1 and Type 2 dimensions (hash-based change detection, temporal joins) to preserve historical accuracy for customer credit and commercial attributes.
- Reconciled millions of transactional records against source systems, achieving exact row-count parity and 96%+ dollar-value reconciliation certainty on a multi-year accounts-receivable dataset.
- Cross-validated a customer-balance/aging fact table against an independent business report; identified and fixed 3 real data-logic defects, closing the reporting gap to within 0.2 percentage points.
- Built and published a Power BI dashboard (star-schema model, DAX) for the Credit & Collections team.

Data Analyst | NanoTess

May 2024 – May 2025

- Developed Power BI dashboards and Excel models to monitor clinical and operational KPIs for international stakeholders.
- Performed data cleaning, transformation, and trend analysis using SQL and Python.
- Built automated reporting workflows that reduced manual data preparation for internal teams.

FEATURED PROJECTS

Accounts Receivable Medallion Data Warehouse

github.com/romloc11/accounts-receivable-medallion-dwh

- End-to-end Bronze/Silver/Gold data warehouse on SQL Server sourcing SAP ECC data; SCD Type 1/2 dimensions, incremental fact tables, data-quality validation layer, full documentation.

Payment Behavior Dashboard — Power BI

github.com/romloc11/payment-behavior-dashboard

- Star-schema Power BI report with SCD Type 2 region and credit-analyst breakdowns; self-contained with synthetic sample data for public portfolio review.

EDUCATION & CERTIFICATIONS

- Nanotechnology Engineer | ITESO (2019–2025)
- Google Data Analytics Professional Certificate | Google
- Programming with Python | edX
- Microsoft PL-300 (Power BI Data Analyst Associate) — in progress
